1. Claims 14-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 14, it is unclear what “an electrical coupling” of the workpiece” and “an electrical coupling” of the chuck represent. Are they shown in any of drawings?

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Stillman (Pat # 4,754,555).

As to claims 14-16, Stillman discloses an apparatus for inspecting the coplanarity of leaded surface mounted electronic components having a chuck (42,44,46) for holding an electronic workpiece (10) with electrical coupling (12) and coupled with electrical coupling (electrical contact underneath of spring “76” as shown in figures 4-5) of a chuck and intermediate member including a plurality of electrical interconnects (78) to electrically connect the electrical coupling (12) with the electrical coupling of the chuck.

Art Unit: 2858

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stillman (pat # 4,754,555).

Stillman discloses an apparatus for inspecting the coplanarity of leaded surface mounted electronic components as mentioned in paragraph # 3. As to claim 17, the type of electrical interconnect such as "a wire" would have been considered as an alternative choice and also well known in the art as long as it can conduct the signals.
